

Anthony Deepak Chitikela

Backend Developer

anthonydeepak.ch1@gmail.com | +91 6281681018 | Hyderabad, India

PROFESSIONAL SUMMARY

- Backend Developer with 3 years of experience designing and building scalable REST APIs using FastAPI.
- Strong expertise in FastAPI, PostgreSQL, Database modelling and API optimization.
- Demonstrating excellent collaboration with cross-functional teams and a commitment to delivering high-quality solutions.
- Strong focus on writing clean, maintainable code and building production ready backend systems.

SKILLS

- **Programming & Frameworks:** Python, Pandas, Pydantic, FastAPI, SQLAlchemy (ORM)
- **Databases:** PostgreSQL
- **Cloud Platforms:** AWS (EC2, S3, Lambda, Secrets Manager)
- **Other:** Git, Linux, Bash, API Design

PROFESSIONAL EXPERIENCE

Project-1 : Invoice DataLedger Service *(Aug, 2025 – Present)*

Organisation: TCS | Role: Systems Engineer

- Architected and developed high-performance backend APIs using FastAPI, PostgreSQL, and SQLAlchemy, supporting scalable enterprise workflows.
- Designed and orchestrated invoice PDF processing pipelines using Apache Airflow, enabling reliable, fault-tolerant document processing.
- Built an LLM-powered invoice data extraction engine capable of handling highly complex, unstructured PDFs using both self-hosted and external LLMs, significantly reducing manual data entry.
- Implemented CI/CD pipelines with GitHub Actions, improving release velocity and reducing deployment risks.

Project-2 : Enterprise Reporting *(Sept, 2022 – Aug, 2025)*

Organisation: TCS | Role: Assistant Systems Engineer

- Designed and developed a backend service powering an internal employee portal used for generating business reports.
- Built REST APIs to dynamically fetch and process large datasets based on user-defined filters such as date ranges, regions, LOBs and business units.
- Implemented role-based access control (RBAC) using OAuth2 and JWT to restrict data access based on user roles.
- Designed modular query-building logic using SQLAlchemy to support complex filtering, aggregation and pagination.
- Optimized database queries and response structures to support frontend-driven report generation workflows.
- Implemented API pagination, sorting and filtering to handle high volume datasets efficiently.
- Added background task processing for audit logging and notification triggers.
- Applied API rate limiting and input validation using Pydantic for secure and stable API performance.
- Managed schema evolution using Alembic and ensured backward compatibility of APIs.
- Integrated AWS S3 for storing and retrieving report-related datasets and processed outputs and deployed the application on EC2.

EDUCATION

- B.Tech in Computer Science and Engineering – Gayatri Vidya Parishad – 2018 – 2022

LANGUAGES

English, Telugu
